ChatGPT miscellany

I asked ChatGPT is come up with the plot for a cop buddy movie between a person (me) and an AI program. While not going to win points for originality, I am really intrigued by the two “mishaps and misadventures”, i.e. fire alarm and the vending machine.

I’m also interested that I didn’t provide the name or gender of the AI but I wonder if the word “sassy” would have been used if the name chosen wasn’t a “feminine” name. This may be an example of learned bias being reinforced.

> The movie follows the adventures of two unlikely partners: a bumbling police detective named Michael and a **sassy** artificial intelligence named **Alice**. When Michael is assigned to a high-profile case involving a string of robberies, he is paired with Alice, a newly developed AI designed to assist with investigations.

> At first, Michael is skeptical of Alice's capabilities and unwilling to trust a machine to help with his work. But as they team up to track down the perpetrators, Michael starts to see that Alice is more than just a machine - she is a valuable partner with her own unique skills and insights.

> As they work together to solve the case, Michael and Alice encounter a series of hilarious mishaps and misadventures, including **accidentally setting off the building's fire alarm while trying to hack into a computer, and getting into a heated argument with a vending machine over the price of a snack**.

> Despite the challenges they face, Michael and Alice always manage to come out on top thanks to their combined wit and determination. In the end, they successfully crack the case and bring the perpetrators to justice, becoming the most unlikely crime-solving duo in the city. As they celebrate their victory, Michael realizes that he has learned to appreciate and trust Alice's unique abilities, and the two vow to continue working together to keep the city safe and laughing.
