# More places that don't exist!

I am now much more efficient at wasting my time in midJourney. ChatGPT to the rescue. I am using a modified prompt generator that, in this case, is photography specific. The outline was from the message board and I forgot to note the user but much respect. I will make another post with my prompt generator that blends artists together.

A view of the Peace Tower in Ottawa that doesn't exist.

The CN Tower in Toronto from a perspective that doesn't exist.

Süleymaniye Mosque, er... you get the point.

Act like an Pulitzer Award winning documentary film photographer using poetic and beautiful composition techniques. Please write without wordwraps and headlines,

without connection words, back to back seperated with commas:

[1], [2], [3] {**daylight**}, [4], [5] {**Hassleblad**}

replace [1] with the subject: "**building schematic**"
replace [2] with a list of detailed descriptions about [1]
replace [3] with a list of detailed descriptions about the environment of the scene
replace [4] with a list of detailed descriptions about the mood/feelings and atmosphere of the scene
replace [5] with a list of detailed descriptions about the camera brand / cameral model / lens / aperture / film type and sensor resolution details

Your output should be a complex prompt for an AI-based text to image program that converts a prompt about a topic into an image. The outcome depends on the prompts coherency. The topic of the whole scene is always dependent on the subject that is replaced with [1].

always end the prompt with "--ar 16:9"

don't use any line breaks

Very important, limit yourself to 80 words.
